

TokenQ

Smart Queue Management for Small Clinics

No more calling names.

Patients see their token on the TV. You call next from your phone.

OPEN THE CONVERSATION

SAY THIS FIRST

"Can I show you something that takes 2 minutes? It'll stop you from having to shout patient names across the waiting room."

BEFORE THE MEETING — SETUP (30 SECONDS)

STEP 1

Open the **TV Display** link on your laptop. Press **F11** for fullscreen.

STEP 2

Open the **Admin** link on your phone. Keep it in your hand.

THE DEMO — 2 MINUTES

1 Show the waiting room screen

Point to the large token number and "Up Next" card on your laptop.

"This goes on any TV. Patients see their number. No more shouting names."

2 Press "Call Next Patient" on your phone

The TV updates instantly — new name, new number, audio announcement plays.

"You press this from your chair, from your consulting room, from anywhere in the clinic."

3 Show Urgent marking

Issue a new token, tick "Mark as Urgent" — that patient jumps to the front automatically.

"For elderly patients, chest pain, emergencies — one tap and they're next."

4 Show the patient view

Open the Patient link on a second phone. They see their token number and estimated wait time.

"Patients check their position from their own phone — no app, just a QR code at reception."

5 Show the language selector

Tick English + Dutch or English + Hindi in admin. Press Call Next — TV announces in both languages.

"Works in English, Dutch, Hindi, or Malayalam — whichever language your patients speak."

6 Close with setup

Any old TV, an HDMI cable, a cheap streaming stick.

"5 minutes to set up. No monthly fees — one-time setup."
